

Professional TEC7 gun

1. Our Tec7 gun is the perfect partner to our Tec7 product range for professionals and DIY enthusiasts alike.
2. Tec7 gun can be used for most products in cartridges, regardless of the viscosity.
3. Tec7 gun can also be used for 2 component products thanks to the 1:18 compression ratio.
4. It has a flow stop control switch that enables a clean finish. The flow stop control switch is the black clip on the release trigger which offers two possibilities, down for continuous pressure, up for a slight regression of the piston to obtain a smoother and slower pouring (spouting) of softer products.
5. The Tec7 gun has a stainless steel piston rod with a hook at the end to allow the gun to be hung. This also reduces rust and corrosion issues.
6. The Tec7 gun has a reinforced transmission system, this section of the gun will require lubrication from time to time, there is an embossed logo on the gun indicating where to lubricate.
7. The Tec7 gun is ergonomic in use thanks to its balance and spinning handle which enables placing the nozzle at the right angle, even when applying product around corners.
8. The Tec7 gun is of very solid construction substantially increasing its life span.
9. The Tec7 gun has an open cartridge holder making changing over cartridges quick and easy.
10. The Tec7 gun has an 1:18 compression ratio, reducing the amount of pulling movements required for product application.
